# Procell Microchanneling

## AFTERCARE & HEALING

- For the first hour and a half post treatment, use a physical barrier, like a hat between the treatment area and the sun. Afterwards, continue to use sunscreen on a daily basis.
- Expect redness and mild sloughing of the treated skin for up to 5 days after treatment. Deeper channeling depths will prolong the healing period.
- Moisturize 5 to 10 applications a day. Trans-epidermal water loss will occur and must be compensated for by additional moisturization. The Procell Cellular Renewal & Healing Accelerator Serums are uniquely designed to help maximize treatment, provide superior moisture and quicken healing times.
- Wait until your skin has healed before using active skincare ingredients. Use common sense when adding active ingredients back into your routine. Patch test and go slow, adding one product with actives at a time.
- Visit [youareface.com](http://youareface.com) for more information.
